ALI AMEER

Junior Penetration Tester | Web Application & Network Security | Open to Remote Roles

LinkedIn: linkedin.com/in/ali-ameer-811786302 • GitHub: github.com/ameer-18-star • Portfolio: ameer-18-star.github.io/Portfolio

SUMMARY

Junior penetration tester with hands-on lab experience from two cybersecurity internships: **30 of 33** graded tasks (**720 points**, ranked **14th**) in Parry Security's Red Teaming track, and a 4-week web application assessment at VortexTech with **100% task completion**. Built Python security tools, including an encrypted password manager with 130 passing tests and a packet sniffer. Background in 50-workstation lab administration and technical training. All testing was done in authorized lab environments. Studying for CEH v13. Seeking a remote junior penetration tester role.

SECURITY EXPERIENCE

Red Teaming Track Intern | Parry Security (remote) *2026*

- Completed **30 of 33** graded tasks for **720 points**; ranked **14th** on the cohort leaderboard (74 interns with scored points).
- Worked labs and modules on Active Directory attack paths, Linux privilege escalation, web security (SQL injection, XSS, SSRF, access control), wireless, mobile, OSINT and penetration-test reporting.
- Used Nmap, Wireshark, the aircrack-ng suite and Kali Linux in VMware and VirtualBox labs; built a WireGuard VPN between a cloud server and a local VM.

Cybersecurity Intern, Advanced Track | VortexTech (remote) *4 weeks | 2026*

- Delivered **4 of 4 weeks** with **100% task completion**, including a web application assessment of OWASP Juice Shop, a deliberately vulnerable lab app, using Burp Suite, SQLMap and Nmap (11 critical findings in week 1).
- Researched the OWASP Top 5 risks and wrote an incident response plan following NIST and OWASP guidance.

SECURITY PROJECTS

VaultKeeper *(Python, SQLite, Fernet)* GitHub — Command-line password manager: PBKDF2-HMAC-SHA256 key derivation with salt, encrypted storage, TOTP codes, reuse and weak-password audit, login lockout, encrypted backups. **130 passing tests**; security limitations documented. AI-assisted.

NetSniff *(Python, Scapy)* GitHub — Packet sniffer with BPF filters. Decodes Ethernet, ARP, IP, TCP flags, DNS and HTTP; exports PCAP and JSON; captures compared against Wireshark. AI-assisted.

ScopeSentry *(Python, PyQt6; prototype)* GitHub — Defensive WiFi monitoring GUI designed to flag deauthentication floods and rogue access points, gated by an authorization manifest with a tamper-evident log. Early prototype under test. AI-assisted.

Security labs repo *(WireGuard, Wireshark, ELK)* GitHub — WireGuard VPN lab, Wireshark PCAP analysis and ELK stack deployment with documented steps.

TECHNICAL SKILLS

Assessment & tools: Nmap · Burp Suite · SQLMap · Wireshark · aircrack-ng · Kali Linux · OWASP Top 10 · MITRE ATT&CK · penetration-test reporting · OSINT (training)

Networking & systems: TCP/IP · Subnetting · Linux CLI · Windows and Linux administration · WireGuard VPN · Cisco Packet Tracer

Programming: Python · JavaScript · HTML/CSS · SQL · Git/GitHub · ELK stack

EDUCATION & CERTIFICATIONS

BS Information Technology | GC University Faisalabad (GCUF) *2021 – 2025 | CGPA 3.5/4.0*

Completed: Google Cybersecurity Professional Certificate · Cisco IT Support Specialist Career Path · Cisco Python Essentials 1 · TCM Security: Practical Help Desk, Practical Security Fundamentals, Linux 100 and Programming 100 Fundamentals

In progress: EC-Council CEH v13 · Cisco Ethical Hacker Path (60% complete)

WORK EXPERIENCE

Founder & IT Trainer | VMSOIT (YouTube, Instagram, Blog) *Apr 2024 – Present*

- Wrote and teach a CompTIA A+ (V15) course on YouTube; reached **45M+ organic views** (15M Instagram, 15M YouTube, 20M Pinterest) and **39K+ site visits** with no paid advertising.

IT & Computer Science Instructor | Sir Syed Scholars Inn; Officer's Science Academy *Jan 2025 – Present*

- Teach networking, operating systems, Python and cybersecurity fundamentals to higher-secondary students through hands-on labs.

Computer Lab Administrator & Technical Support | VMSOIT *Feb 2022 – Apr 2023*

- Kept a **50-workstation** lab running: hardware and software troubleshooting, network connectivity, security settings, and training for non-technical users.
